Deadline For Public Comment

Deadline: May 27, 2019

Please submit comments to the agency or primary contact person listed below, before the deadline.

Rule Details

| | |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Rule Number: | 19P027 |
| Title: | Investigation and Remediation of Contaminated Properties Rule. |
| Type: | Standard |
| Status: | Proposed |
| Agency: | Department of Environmental Conservation, Agency of Natural Resources |
| Legal Authority: | 10 V.S.A. §§ 6603(1), and 6604c(d). |
| Summary: | The Rule established standards and requirements for the investigation and remediation of releases of hazardous materials in a manner that is adequately protective of public health and the environment. The Rule provides the process that must be followed for |

| | |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Persons Affected: | all contaminated properties from initial investigation to final cleanup, remediation, and site closure. All entities involved in the investigation and remediation of releases of hazardous materials to the environment, who may include the public, private businesses, environmental consultants, developers, and State Agencies. |
| Economic Impact: | The proposed revisions decrease current economic impacts. For example, there are new provisions to exempt historical fill from specific procedural requirements after an exemption request is submitted and approved by the Agency. Similar provisions were added that can exempt specific areas of redevelopment from the added time and cost of following our full corrective process, e.g., contaminated soil management related to underground storage tank closures, and public works projects such as water line (re)installations. Changes in environmental media standards will impact the level of site investigation and remediation. |
